**React JS:** Designed the interactive web pages with React JS, JavaScript, Html and CSS, Bootstrap-5 to be Responsive and Accessible across all type of devices.

**Node JS:** Developed models and controllers using mongoose (ODM) and also worked on MongoDB.

## PROJECTS

### • Newsify

The Newsify App is a dynamic and user-friendly web application built using React.js and NewsAPI. By using this application you can read all types of news in real time on a single web app, it's like a compilation of news. It uses basic principles to fetch the latest news from a News API and show them to users based on their interests.

### • Weather App

interactive Weather Application using ReactJS library. The application allows users to get information on various cities in real time. With the help of API, we are fetching the weather details of the city which is been searched by the user. The application is completely responsive and the response in terms of the output is also given in a quick time.

### • PDF Merger

Combine multiple PDF files into one using PDF Merger tool. The Merge PDF tool is popular for its common uses in business, education, e-learning, and beyond. This tool is made using express, multer and pdf merger npm package.

### • PhoneBook

This Phonebook WebApp enables you to do basic Phonebook operations such as you would do on your phone. Contacts may be added, listed, modified, searched, and deleted (perform CRUD operations). Almost every function in this little project makes substantial use of file management and data structure ideas. PhoneBook app is developed using Nodejs, express, jsonWebTokens, bcrypt, MongoDB, Postman etc.
